

Will Your Case Fit?

PowerSync Tray for iPad

Overview

This document is intended to provide the maximum recommended case dimensions for use with the Bretford PowerSync Tray for iPad. This information is provided solely as guidance* and is not a fit guarantee.

Directions

Lay your case flat in the large rectangle. If the case fits within the perimeter of the rectangle, the height and depth of the storage slot will accommodate the case.

If any part of the perimeter is obstructed, the case may not fit inside the PowerSync Tray for iPad.

Now, place the case on its end in the smaller rectangle to the right. If you can see the perimeter lines, the width of the storage slot will accommodate the case.

If any part of the perimeter line is obstructed, the case is too wide and may not fit inside the PowerSync Tray for iPad.

*Many factors can affect how well a case fits, including outer dimensions, port opening dimensions, and even the case material. To best determine how well a case works with your PowerSync Tray for iPad, Bretford recommends purchasing a single case for testing.
